ABOUT THE MANUFACTURER

Crafting Doors. Connecting Spaces.

At Legno Entegre, engineering expertise meets architectural design to create door systems defined by quality, performance and style. For over a decade, we have maintained a strong presence in the United Kingdom, supplying certified door systems across residential, commercial and public sectors. Our export network spans more than 30 countries, reflecting the international trust in our standards and consistency.

We specialise in fire-rated doors from FD30 to FD120, alongside acoustic and non-fire-rated solutions. Every door is purpose-designed, tailored to its environment and aligned with contemporary design as well as regulatory requirements.

Our collection offers flexibility in scale and specification. From efficiently engineered core ranges to fully bespoke models, Legno Entegre supports diverse design programmes, budgets and building projects. Whether private housing, high-rise developments, educational campuses, medical facilities or hospitality schemes, we deliver with precision and care.

Thousands of our doors have been installed across the UK, supporting architects, developers and contractors who value reliability, design integrity and project readiness. Each door reflects precise fabrication, controlled materials and disciplined manufacturing processes.

At Legno Entegre, a door is more than an object. It is a defining architectural interface where aesthetics meet performance, and thoughtful design becomes built reality.

ABOUT THE SUPPLIER

Precision Built. Professionally Delivered.

All UK operations are managed exclusively by LDF Supply Limited, the authorised distributor of Legno Entegre.

LDF, standing for Legno Door and Furniture, exemplifies unwavering dedication to precision, quality and flawless project delivery.

From the outset of every assignment, our team provides expert technical guidance, considered product selection and meticulous coordination, ensuring every door is delivered on time, fully compliant and to the highest standards.

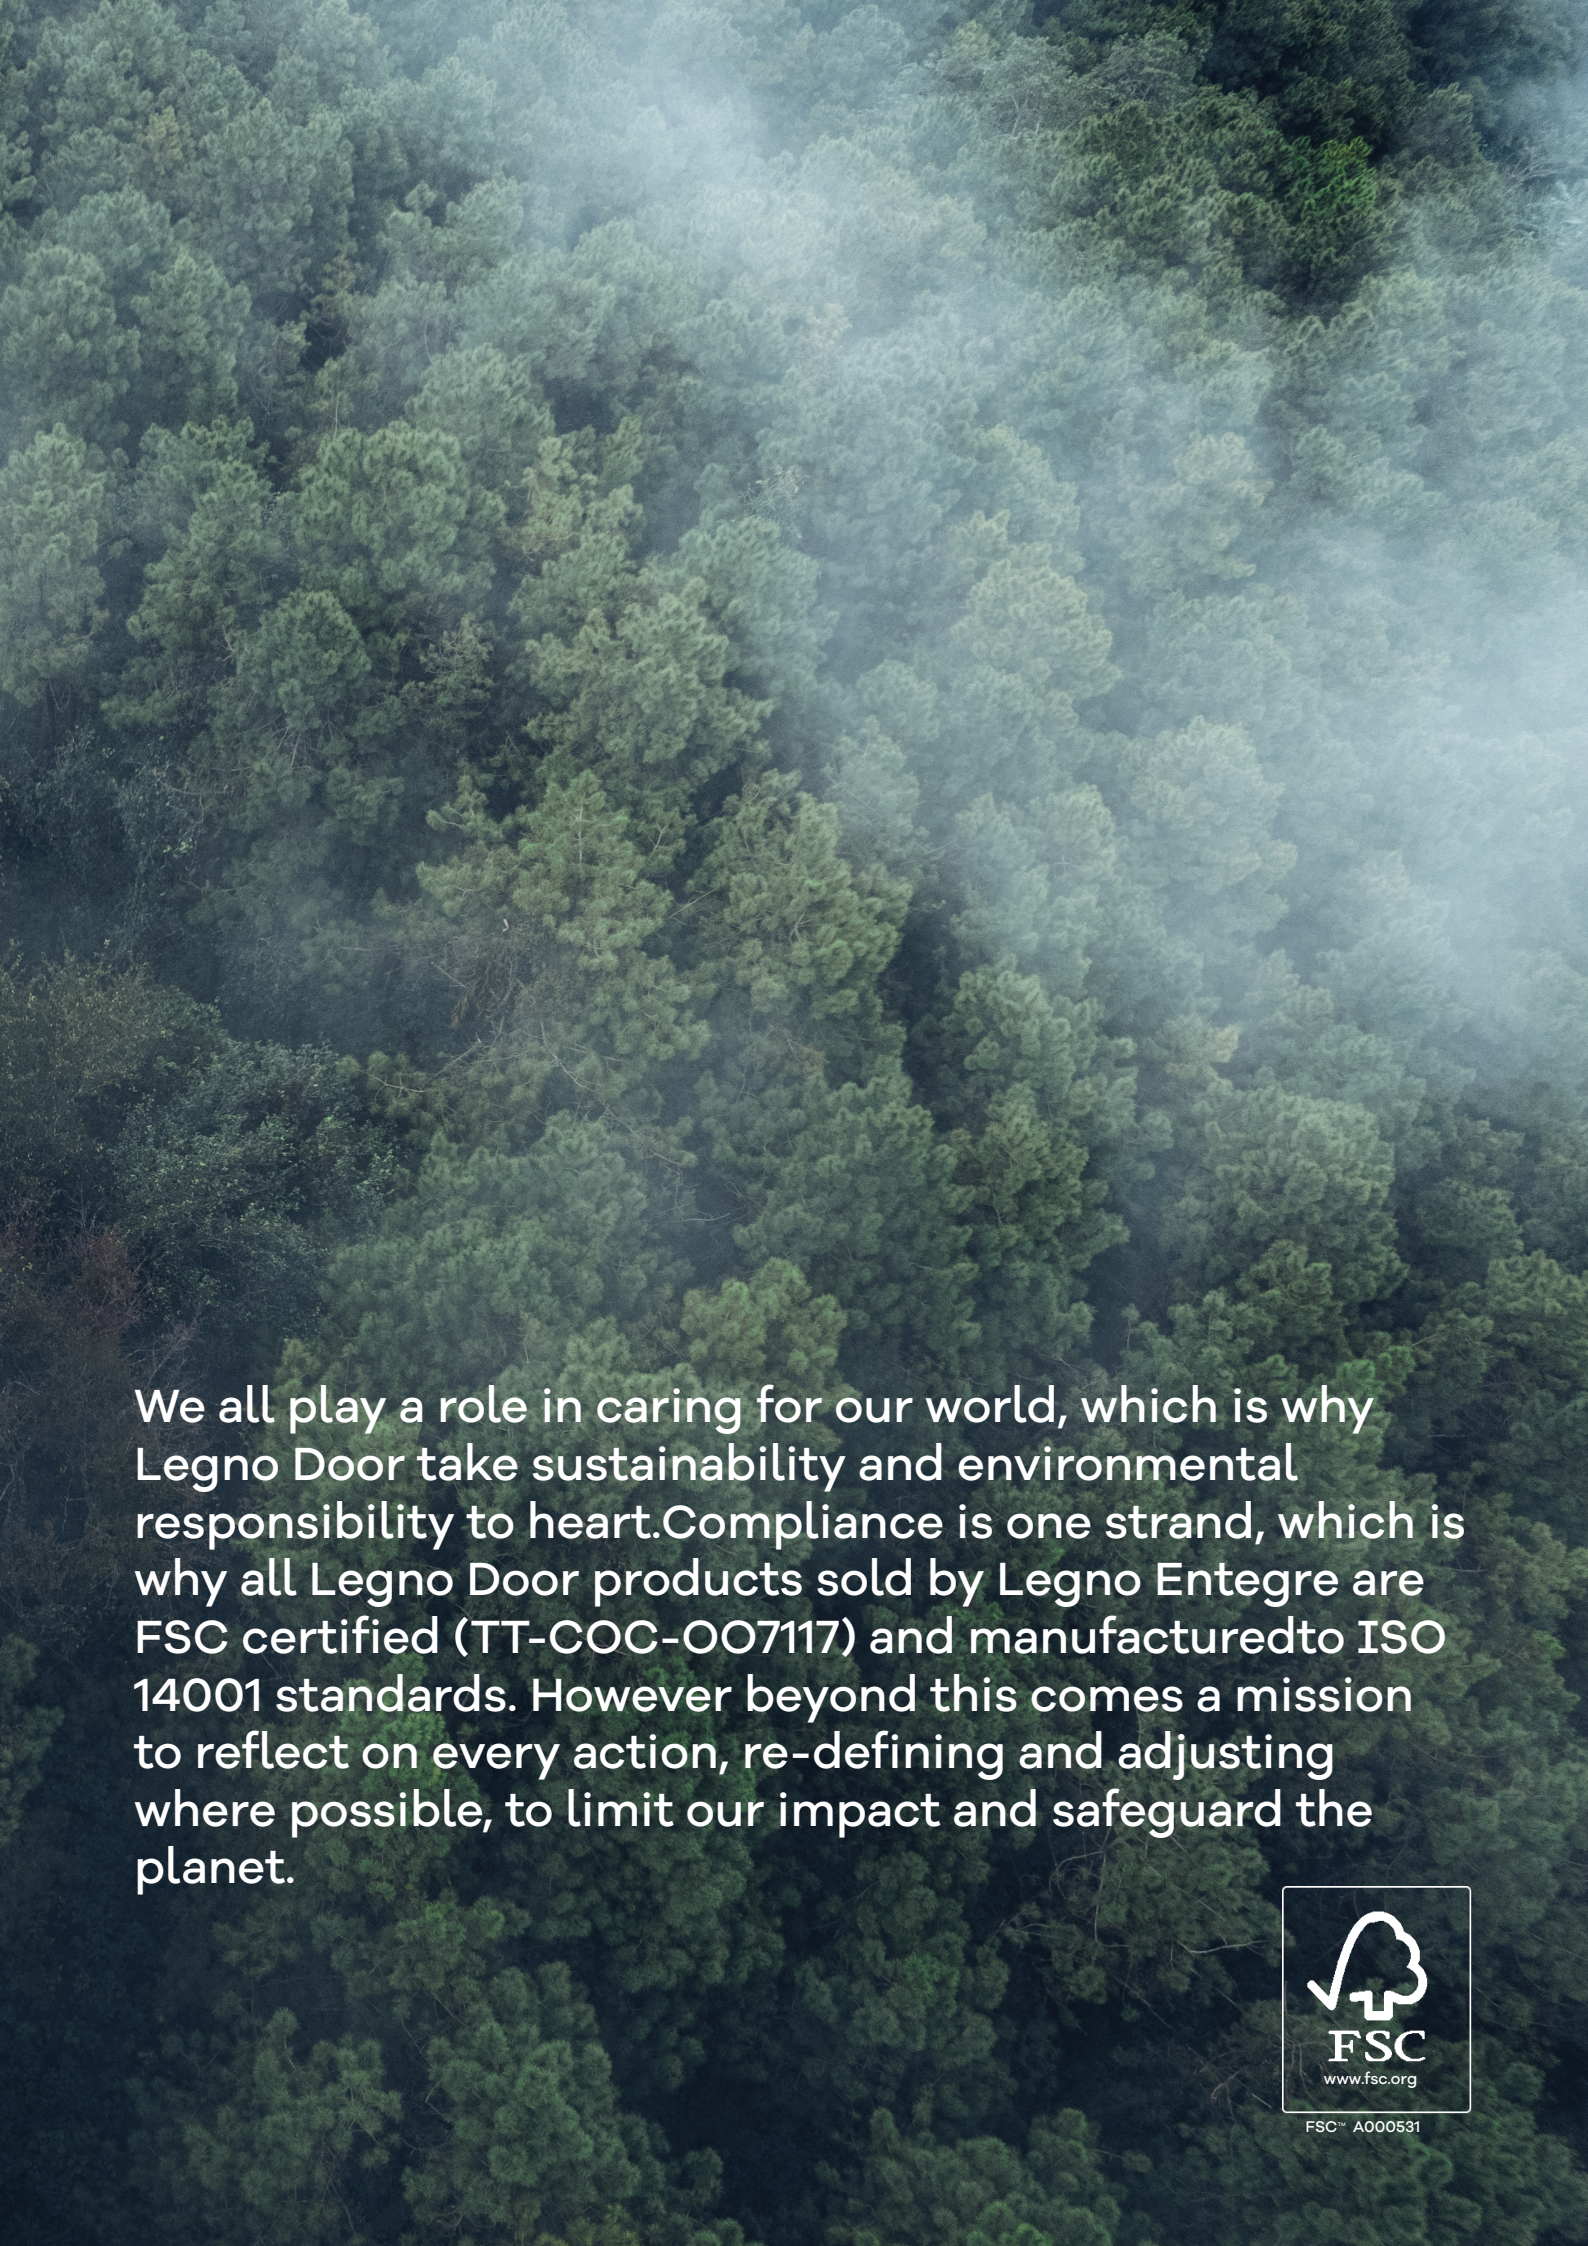

We collaborate closely with architects, designers and contractors, anticipating complex requirements and providing solutions that safeguard design integrity and operational excellence. Every order is meticulously planned, monitored throughout production and handled with disciplined logistics, reflecting our commitment to absolute reliability.

Clients are invited to visit our dedicated showroom to experience full collections, finishes and ironmongery, supported by comprehensive, professional consultation.

Beyond doors, Legno Entegre manufactures kitchen units, bathroom cabinetry, wardrobes, bespoke cabinet fronts, decorative panels and a full suite of furniture components, all supplied across the UK via LDF's trusted network, ensuring consistency, quality and complete project assurance.

save
our trees

We all play a role in caring for our world, which is why Legno Door take sustainability and environmental responsibility to heart.Compliance is one strand, which is why all Legno Door products sold by Legno Entegre are FSC certified (TT-COC-007117) and manufacturedto ISO 14001 standards. However beyond this comes a mission to reflect on every action, re-defining and adjusting where possible, to limit our impact and safeguard the planet.

Internal Doors

Crafted for Timeless Interiors

Legno internal doors unite precision engineering with a refined design language, supporting projects from luxury residences to commercial, educational and healthcare environments.

An extensive palette of finishes integrates naturally with cabinetry, kitchens, wardrobes, flooring and architectural profiles, enabling fully bespoke compositions.

Doors can be configured as single or double leaf, glazed or solid, with optional sidelights or toplights, and are available with fire ratings up to FD120 as well as acoustic and thermal performance.

Approved hardware compatibility and meticulous construction ensure seamless installation, long term durability and a coherent design identity throughout the interior.

External Doors

Engineered for Lasting Exterior Performance

Legno external doors are built around a specialised exterior-grade core that delivers exceptional thermal insulation, moisture resistance and long-term stability.

Designed to withstand rain, wind, UV exposure and temperature variation, they maintain consistent performance and refined architectural presence. Specifications range from non-fire rated to FD120.

Single or double leaf formats, glazed or solid panels, with sidelights or toplights, can be tailored to façade requirements.

Frames and architraves in solid hardwood or hardwood plywood, combined with advanced exterior finishes and coordinated ironmongery, ensure durable, secure and visually coherent entrance solutions.

AREAS OF USE

Housing

Designed for Living Built for Longevity

Residential developments require door systems that deliver lasting performance, design integrity and modern practicality. Legno supports every scale of housing project with fire rated and non-fire rated solutions that balance functionality, cost efficiency and visual harmony. With extensive finishes, acoustic options and adaptable constructions, we meet the diverse needs of private homes, build to rent schemes and social housing. Our close collaboration with architects and developers ensures specification, compliance and delivery are perfectly aligned.

Commercial

Where Function Meets Identity in Every Detail

Commercial environments require door systems that combine flexibility, durability and visual continuity. Legno supports offices, retail spaces, coworking hubs and mixed-use developments with fire rated and acoustic solutions that balance performance with refined design. Our durable laminates, high gloss lacquers and bespoke veneers integrate seamlessly with modern access systems and architectural ironmongery. Options such as acoustic insulation, concealed closers and extended-height configurations meet the demands of reception areas, meeting rooms and service zones. With coordinated scheduling and reliable delivery, we uphold both quality and aesthetic standards across every commercial project.

Hospitality

Elevating Guest Experience Through Silence and Style

Hospitality environments demand door systems that enhance atmosphere, acoustic comfort and long-term durability. Legno provides refined solutions for guest rooms, corridors, public spaces and service areas, ensuring visual consistency throughout the interior concept. Fire rated and acoustic options are offered in lacquer, HPL and natural wood veneer finishes, combining strong aesthetics with certified performance. From boutique hotels to large scale developments, our coordinated door, joinery and ironmongery solutions ensure seamless integration. We support every stage of specification and delivery with the precision hospitality projects require.

Senior Living & Student Accommodation

Tailored Door Solutions for Care and Campus Life

Senior care residences and student housing share a need for safety, durability and ease of use. Legno provides certified door systems tailored to each environment's functional and architectural demands. Senior living solutions prioritise comfort, accessibility and calm circulation, while student accommodation doors offer impact resistance, fire protection and long-term performance. With tailored cores, finishes and machining, every system delivers safety, usability and visual continuity from private rooms to shared corridors.

Education

Durability You Can Teach with Safety You Can Trust

Educational environments require doors that withstand constant use while meeting strict safety and hygiene standards. Legno provides certified fire rated and acoustic doors engineered for durability across classrooms, laboratories, corridors and administrative areas. High pressure laminates offer scratch resistance, impact strength and antibacterial protection. With extended height and factory glazed options available, every system meets British and European standards, delivering reliable performance for modern learning environments.

Medical

Precision Engineered for Clinical Environments

Healthcare environments require precision, hygiene and long-term reliability. Legno provides fire rated and acoustic doors for hospitals, clinics and specialist care facilities, designed to meet stringent regulatory and operational demands. Durable surfaces support easy cleaning, antimicrobial protection and resistance to chemicals and impact. Across patient rooms, corridors, surgical areas and utility zones, our doors deliver dependable performance. Solid core constructions, drop seals and certified hardware ensure compliance with NHS and private healthcare standards, supported by expert guidance from concept to commissioning.

Fire Rated Doors

Engineered to Withstand.
Designed to Endure.

Legno fire rated doors combine certified performance with a refined architectural presence. FD30, FD60, FD90 and FD120 models are built with precision engineered fire resistant cores, high quality intumescent detailing and full compatibility with approved hinges, locks, closers and drop seals. Smoke control variants support protected escape routes in accordance with BS 476 and EN 1634 3, using integrated perimeter seals that maintain a clean visual expression.

Finishes match our wider collections, ensuring design continuity across HPL, lacquered, paintable and veneer surfaces. Certified frames, architraves and vision panels guarantee the integrity of the entire assembly under demanding conditions. With acoustic or thermal upgrades available, these doors are suited to hotels, schools, healthcare facilities, mixed use schemes and high-density residential projects.

Supported by comprehensive documentation and expert technical guidance, Legno fire rated doors deliver proven reliability without compromising architectural intent.

Acoustic Doors

Where Silence Becomes Comfort.

Legno acoustic doors transform interior quality by delivering controlled silence with architectural finesse. Rated from Rw 28 dB to Rw 52 dB, they support residences, hotels, healthcare, education and corporate environments where privacy and calm are essential.

Precision engineered cores, high performance seals and drop thresholds ensure verified acoustic integrity, while refined finishes align perfectly with surrounding design schemes.

Dual rated options unite FD30–FD120 fire resistance with advanced sound insulation, creating complete performance solutions. Tested to European and British standards, our acoustic doors offer reliable, elevated quietness wherever sound truly matters.

Security Doors

Engineered for Protection.
Proven by Standards.

Legno security doors unite advanced intrusion resistance with formally recognised British certification. Manufactured in full accordance with PAS24 and approved under the UK police backed Secure by Design initiative, every door set is rigorously tested for mechanical strength, impact resistance and sustained attack durability, forming a resilient protective barrier through reinforced cores, multi point locking systems and precisely integrated security hardware.

FD30 and FD60 fire rated options extend this performance with certified life safety protection, allowing fire resistance and intrusion resistance to coexist within a single coordinated door system. All sets are supplied with certified frames, secure glazing options and fully tested architectural ironmongery.

Finishes across HPL, lacquered, paintable and natural veneer surfaces ensure seamless integration. Suitable wherever Secure by Design compliance is required, Legno doors deliver verified protection with full certification.

FLUSH MODELS

Pure Surface, Silent Presence.

A plain, uninterrupted door surface with no routed or applied detailing, offering a minimal architectural expression that integrates seamlessly within contemporary interiors.

- Completely flat panel construction without groove or moulding
- Clean surface continuity suited to modern architectural schemes
- Supports a calm visual environment and material clarity
- Ideal for contemporary residences, workplaces, hotels and high traffic interiors

ELITE MODELS

The Art of Refined legance.

Deep recessed panel forms produce pronounced shadow lines and a confident architectural character with strong spatial definition.

- Substantially deep routed panel geometry

- Grooves approximately 6 to 8 mm deep and 12 to 20 mm wide
- Strong shadow bands that reinforce hierarchy and sequence

- Performs well as a focal element in tall doors and feature thresholds

- Appropriate for high end residences, executive workplaces and distinguished hospitality

Polymer Collection

Engineered for performance. Designed for versatility.

The Polymer Collection delivers meticulously crafted polymer surfaces that combine exceptional durability, visual consistency and effortless maintenance. Factory-finished to perfection, every door and panel requires no additional painting or varnishing, providing a ready-to-install, flawless surface that consistently impresses architects, designers and end-users alike.

Available in smooth matte or subtly textured finishes, the collection offers an elegant palette of solid tones and refined woodgrain effects, seamlessly complementing a wide spectrum of interior styles. Compatible with all key Legno door models – Flush, Standard, Premium, Elite, Country, Prestige and Heritage – it also extends to wardrobes, kitchens, bathrooms and fitted furniture, ensuring a cohesive finish across any project.

Optimised for high-traffic and intensive-use environments, polymer surfaces provide practical resilience, hygiene and stability. Their efficiency, cost-effectiveness and rapid production make them ideal for fast-paced or budget-conscious projects, without compromising quality or aesthetic appeal.

Ironmongery can be precisely chosen to harmonise with surface tones and design intent, delivering a considered and fully integrated result.

Best suited for: Residential interiors, student accommodation, compact living, office fitouts and projects where flawless, maintenance-free surfaces, reliability and cost-effective elegance are paramount.

Laminate Collection

Consistent quality. Everyday durability.

The Laminate Collection features high-pressure decorative surfaces that combine visual uniformity with strong resistance to wear, impact and moisture. These factory-applied finishes are well suited to interior settings where practicality and surface stability are key.

Available in a range of solid colours, woodgrain effects and abstract patterns, laminate surfaces offer a clean and dependable aesthetic across diverse project types. The finish is easy to maintain and performs reliably in high-use environments.

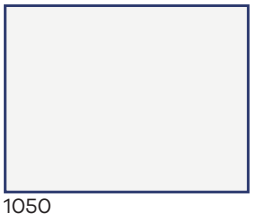

The collection supports Flush door models with optional groove detailing. While grooves can be applied, they cannot be laminated internally. Instead, they are typically finished in contrasting tones such as matt black. Aluminium inlays may also be integrated for enhanced architectural expression.

Best suited for: Offices, education buildings, healthcare interiors, commercial fitouts and high-traffic spaces requiring robust, low-maintenance finishes.

Paint Ready Collections

Two harmonious pathways to colour-led refinement.

Our Paint-Ready Collections provide carefully prepared surfaces for schemes in which the final shade is selected on site or applied by specialist finishers. Both options are developed to ensure confident paint adhesion and a smooth, even appearance, while supporting different project requirements.

Paint Primed doors are prepared with a smooth water-based primer that forms a reliable base for the chosen topcoat. The surface may be lightly sanded and repainted over time, allowing colour changes and subtle adjustments with ease. This flexibility supports thoughtful coordination with evolving palettes and architectural elements. When using alternative paint systems, a brief compatibility assessment on site is recommended.

Paintable Polymer surfaces provide the same freedom of final colour selection, supported by an ultra-smooth and opaque polymer face that does not require face sanding or additional priming prior to painting. This approach reduces time and labour on site and helps achieve a consistent professional finish, particularly where programme efficiency is important.

Best suited for: Refined residential, commercial and hospitality environments seeking cohesive colour expression and dependable long-term performance.

Paint Ready Collections

Lacquered Collection

A flawless surface that reflects elegance and precision.

The Lacquered Collection stands at the forefront of door finishing, meticulously executed with high-performance polyurethane coatings engineered to resist scratches, yellowing and fading. Every surface is precision-crafted within controlled factory conditions, achieving an impeccable finish that consistently exceeds global standards and defines our own benchmark of excellence.

It's refined semi-matt sheen strikes the perfect balance between light and texture, avoiding the harsh glare of gloss and the dullness of matt. The result is an interior surface that exudes understated sophistication, seamlessly complementing both contemporary and classical design environments.

Best suited for: High-end residences, private apartments, executive offices, boutique hotels and curated interiors that demand lasting elegance, flawless surfaces and an unmistakable premium statement.

Wood Veneer Collection

Nature refined. Character preserved.

The Wood Veneer Collection embodies the warmth, authenticity and unrivalled elegance of real timber, merging natural beauty with exquisite craftsmanship. Designed for discerning interiors, it elevates every space with a sense of prestige and sophistication.

Industrial (Engineered) Wood Veneer is precision-processed from premium timber to reproduce classic wood grains with up to 98 percent tonal consistency, delivering flawless uniformity across large-scale projects where colour stability and pattern control are paramount.

Natural Wood Veneer is sourced from the finest species, including American Walnut, European Oak and Teak. Each panel is inherently unique, with subtle grain and tonal variations that bring character, depth and timeless appeal to interiors of distinction.
Offered across all Legno door models – Flush, Standard, Premium, Elite, Country, Prestige and Heritage – the collection also extends seamlessly to wardrobes, bespoke cabinetry and fitted furniture, ensuring a harmonious and luxurious design language throughout.

Darker veneers are ideally paired with brushed gold or matt black hardware, while lighter tones harmonise beautifully with satin chrome or stainless steel, enhancing both contrast and elegance.

Best suited for: High-end residences, boutique hotels, executive offices and prestigious public interiors where natural materials, craftsmanship and uncompromising quality define every detail.

Door Frames & Architraves

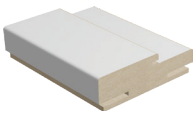

An Integrated System for Architectural Precision

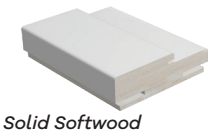

Legno door frames and architraves are designed as a unified system that defines the opening with structural accuracy, material consistency and refined architectural character. This combined approach improves buildability, supports efficient installation and ensures design continuity across residential, commercial and hospitality projects.

Materials and Finishes

Frames and architraves can be produced in MDF, moisture resistant MDF, chipboard, moisture resistant chipboard, softwood plywood, hardwood plywood, solid softwood, solid hardwood or WPC composite.

All elements may be supplied paint primed, lacquer finished, veneer faced, decorative foil faced or completed in CPL, allowing full alignment with any Legno door collection.

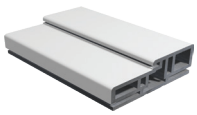

MDF

Solid Softwood

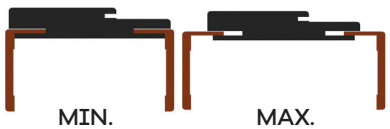

Solid Hardwood

Softwood Plywood

Hardwood Plywood

WPC Composite

Dimensions and Profiles

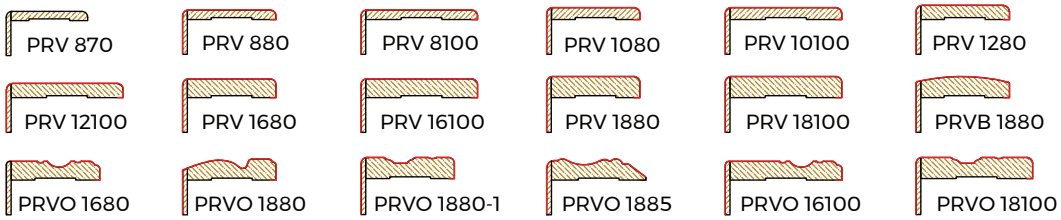

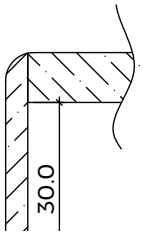

Frames

- Single piece production from 80 to 300 millimetres
- Extension profiles used for greater wall depths
- Frame thickness from 19 to 32 millimetres plus stopper options from 12 to 18 millimetres
- Total frame thickness is determined by project performance requirements and by the hardware specified, such as concealed hinges, concealed closers or fire rated assemblies.

Architraves

- Widths from 60 to 250 millimetres
- Side and head architraves may be specified in different proportions to suit the architectural composition and the intended design expression.
- Available in decorative or minimalist profiles such as flat, bullnose, ogee, torus, chamfer, stepped, Georgian and Victorian

Core Material Options

Expertly Selected for Every Performance Requirement

Choosing the correct core is fundamental to the strength, stability and long-term performance of a door. Legno guides each project through this process, ensuring the core aligns precisely with fire rating, acoustic needs, thermal performance and environmental exposure.

• Non fire rated doors are offered with honeycomb, EPS, tubular chipboard or solid chipboard cores, allowing flexibility in weight, cost and acoustic value.

• Fire rated doors progress to denser structures, from tubular chipboard to solid chipboard and solid mineral cores, calibrated to the required FD rating.

• External doors utilise exterior grade dense cores engineered for thermal insulation, moisture control and dimensional stability under continuous weather exposure.

Each core type is selected through consultation, ensuring the chosen structure genuinely suits the building's performance demands while maintaining identical external aesthetics across the entire door package. This approach gives architects and developers confidence that every door meets the highest technical standard with no compromise on design.

Honeycomb Craft Paper Core

Wood Grill Core

Tubular Chipboard Core

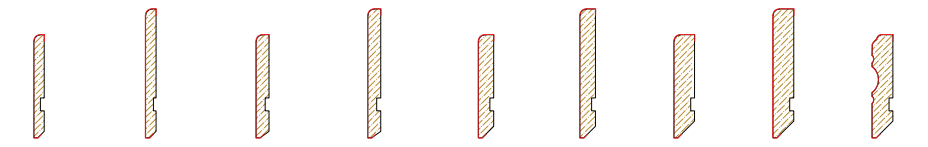

Solid Chipboard Core

Skirtings

Continuity That Defines the Interior

Skirting extends the architectural line of the architrave, unifying wall and floor with clarity and proportion. Legno offers an extensive portfolio of skirting profiles, from flat and bullnose to ogee, torus, chamfer, stepped, Georgian and Victorian. Produced in stable substrates with coordinated finishes, our skirting ensures complete design continuity and refined protection, making Legno the preferred choice for fully integrated interior specifications.

Bypass Sliding

In-Wall Sliding (Pocket)

Wall-Mounted Sliding

Sliding Patio

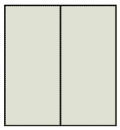

Barn Sliding

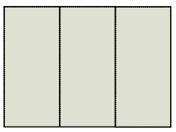

Every system enhances spatial efficiency, improves circulation flow and maintains a clear, continuous architectural line throughout the interior.

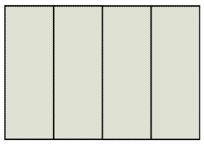

Door Configurations

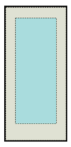

Door configurations allow transparency, acoustic performance and visual emphasis to be tailored precisely to the requirements of each space, ensuring both functional and architectural cohesion.

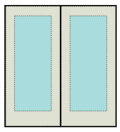

Single Unglazed Door

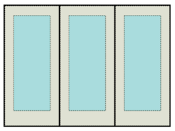

Double Unglazed Door

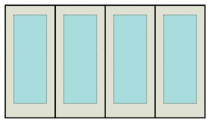

Triple Unglazed Door

Quadruple Unglazed Door

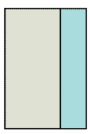

Single Glazed Door

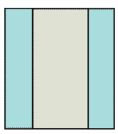

Double Glazed Door

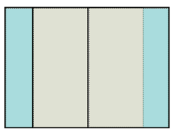

Triple Glazed Door

Quadruple Glazed Door

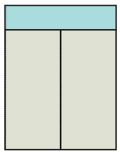

All configurations coordinate seamlessly with Legno door finishes, frame systems and architectural profiles, creating a unified and fully resolved interior specification.
